Industry Experience

Prospecta Software Pvt. Ltd.

Feb. 2022 – Present

Software Development Engineer Frontend (Angular)

- Designed and developed **enterprise-scale Angular applications** used in ERP and Master Data Management (MDM) products handling large volumes of business data
- Owned frontend development** of the MDM platform, building workflows for data creation, validation, enrichment, approvals, and bulk operations
- Improved UI performance by **35–40%** by implementing **OnPush Change Detection**, optimizing RxJS subscriptions, and eliminating unnecessary re-renders
- Resolved severe performance bottlenecks caused by redundant API calls by introducing **frontend caching (observable-based & in-memory)**, reducing API traffic by **50%+**
- Built and maintained **reusable Angular component libraries**, improving UI consistency and reducing feature development time
- Implemented **virtual scrolling and infinite scrolling** for data-heavy screens, ensuring smooth UX for large datasets
- Developed analytical dashboards using **Chart.js** to visualize business metrics and insights
- Worked extensively with **Angular routing, lazy loading, guards, and resolvers**, improving application startup time and navigation flow
- Collaborated closely with backend teams to integrate REST APIs, handle edge cases, and improve overall system stability

PROJECTS

Enterprise Master Data Management (MDM) Tool

- Owned frontend modules responsible for **core enterprise data management** including creation, validation, enrichment, approvals, and bulk operations
- Optimized performance using **OnPush Change Detection**, RxJS operators, and frontend caching mechanisms
- Improved user experience for large datasets through **virtual scrolling and lazy loading**

ERP Web Application

- Developed ERP dashboards and **workflow-driven UI modules** using Angular
- Implemented **role-based views** and optimized routing to improve scalability and navigation flow
- Ensured seamless **frontend-backend integration** for business-critical workflows

Frontend Performance Optimization Initiative

- Identified UI performance issues caused by **excessive API calls and heavy DOM updates**
- Introduced frontend caching and change detection optimizations, **significantly improving page load time and responsiveness**

EDUCATION

IIMT College of Engineering

Aug. 2018 – May 2022

Bachelor of Technology in Computer Science and Engineering

GPA: 8.2 / 10

SKILLS

Frontend: Angular (v12v19), React **Languages:** TypeScript, JavaScript (ES6+)

State Management: RxJS, Redux **Performance Optimization:** OnPush Change Detection, Lazy Loading **Tooling &**

Deployment: Git, Jenkins, Nexus, CI/CD, QA/UAT/Production
